#### Foreword

The 'Visitation Statistics, 1998/99' report, covering the period April 1, 1998 to March 31, 1999, is published annually to supply selected information on Provincial Parks and Recreation Areas. This publication provides data on the following aspects of park visitation:

## Camping Use Statistics

Based on camping permit sales analysis, and / or reasonable estimates of camping use and camper surveys.

#### Day Use Statistics

Collected through Automatic Traffic Counter readings and traffic surveys.

## **Group Camping Use Statistics**

Based on group use permit sales analysis.

# Fixed Roof Accommodation Use Statistics Kananaskis Country - actual number of guests.

Visitation statistics are reported both at the park or management unit level and 'area' level (i.e., individual campgrounds, day use areas, group use areas, fixed roof accommodation facilities). Statistics are summarized for provincial parks and recreation areas. The data collection systems associated with these visitation statistics are discussed in detail in the Introduction Section.

Ten years of historical statistics for camping, group camping, fixed roof accommodation, and day use are included in this report.

As of year-end 1999, there were 64 provincial parks and 282 provincial recreation areas in the province. The majority of parks and approximately half of the provincial recreation areas report visitation. Provincial recreation areas that experience marginal visitation do not report use.

In addition to visitation, this report provides information covering facilities and services for selected sites. To put the province in perspective, a map (see Appendix) is also included. It shows the six Alberta Environment corporate regions in Alberta. Additional information on the provincial parks and provincial recreation areas can be obtained from the following "Web Site": (http://www.gov.ab.ca/env/parks.html)

Inquiries regarding the statistics reported in this document or a further explanation of the methodology are welcomed, and should be directed to the Program Evaluation and Research Coordinator at (780) 427-7009.

Copies of this publication are distributed to other Alberta government agencies, all provincial park agencies in Canada, Parks Canada, and selected libraries (e.g., the Alberta Legislature, Alberta Provincial Archives and the National Library of Canada). In addition, copies of this report are also available in electronic format. Inquiries should be directed to:

#### Introduction

This report presents Visitation Statistics for the period of April 1, 1998 to March 31, 1999. Information is presented for all Provincial Parks and Recreation Areas, at both the park level and 'area' level (e.g., individual campground statistics for those parks with multiple campgrounds).

Visitation statistics have been reported for approximately the last 30 years. This is the 12<sup>th</sup> year of publication of this particular report. Since the first publication in 1986/87, the reporting format virtually remained unchanged. The 1991/92 report represented the first major formatting change as part of an effort to make the report more complete and to provide users with as much useful information as possible. The 1993/94 report was dramatically 'streamlined' in an effort to make the information more user friendly. The 1998/99 report continues with this approach. Additional changes will be phased in, in an on-going basis to better suit the current and / or changing needs of the report users.

Visitation data is not collected for the province's 3 wilderness areas, 155 natural areas, 16 ecological reserves, 31 crown reservations, Willmore Wilderness Park and 15 wildland parks.

Tables summarising statistics for camping use, day use, group use, and fixed roof accommodation use are included in this report. Charts are also included to facilitate the comparison of visitation type and previous year provincial comparisons for the same reporting period. It is important to note that individual campground

statistics do not include overflow. This statistic is only included at the park level. Also, for those parks which have more than one day use area, the Park level day use statistic total discounts for any multiple visitation (i.e., a day use party who visits more than one day use area in the park).

Selected visitation statistics (e.g., campground turnaways, nights at a specified percent range occupancy for camping, or area night's available / occupied for group use areas) which were reported in the past, are not included. They are, however, available upon request. In addition, visitation data can be further analysed to meet specific information requirements. These queries should be directed to the Program Evaluation and Research Coordinator. Brief descriptions of the data collection methodologies used for each category of use statistics follow.

## Camping Statistics Methodology

Camping statistics are based primarily upon information obtained from camping permits. These permits are issued via two systems:

- The Standard Camping Permit system; and
- the Self-Registration Permit (envelope) system.

Standard Camping Permits and associated periodic surveys provide information on occupied campsite nights, average camping party size and accommodation unit usage. This information enables calculation of the

number of campers and camping permits issued (see Glossary).

It is important to note that the average number of camping permits issued for a site is based on past peak season (April to September) survey results. Camping permits issued are therefore derived for the same period. Off-season (October to March) camping permit figures are equivalent to the occupied campsite nights for the corresponding period. There are no off-season survey statistics available for calculating an average number of camping permits issued figure.

Occupied campsite nights are based on the premise that a site is considered occupied when a permit has been issued and that site is occupied by the permittee and at least one camping accommodation unit.

Self-Registration Permits also provide statistics on occupied campsite nights, and requires periodic surveys to provide data on camping party size and accommodation unit usage.

Campground occupancy data are determined from an analysis of:

- campground capacity,
- the number of days in July and August,
- the number of sites affected by closures per day; and
- 4. the total occupied campsite nights per month.

Refer to the Glossary for the formula used in calculating July-August average daily percent occupancy. The average daily percent occupancy. The average daily percent occupancy for July-August is only reported, since this is considered to be the busiest time of the year for camping. Average daily percent occupancy for weekends / weekdays by month and average daily percent occupancy by month are however available upon request. Overflow unit night figures, whenever appropriate, and number of campsites for each campground is included in the camping statistics

Backcountry camping is collected through a permit system.

## Day Use Statistics Methodology

An evaluation of day use data collection procedures in 1981 concluded that the methodology then in use was non-systematic and resulted in day use statistics, which were not accurate. Consequently a day use calibration program was implemented in the summer of 1983 and since then, all Provincial Parks have been surveyed as well as the sub-districts within Kananaskis Country.

For the Provincial Parks and the sub-districts within Kananaskis Country, peak season day use statistics are based on figures collected from automatic traffic counters. Adjustments to these counts include determining the ratio of day use vehicles to all other vehicles entering or exiting the park and average party size. It is important to

note that the ratio of day use to all other vehicles also discounts for multiple visitations to day use facilities or multiple stops along recreation corridors (e.g., the sub-districts within Kananaskis Country). Both the ratio of day use to all other vehicles and average party size adjustment factors are obtained through a periodic day use calibration survey.

The survey involves stopping traffic on 20 randomly selected days during the peak season (April - September) to conduct brief interviews. Daily vehicle counts and the survey information are analysed to yield **estimates** of day use visitation. When traffic counter readings are not available, the total vehicle counts are supplemented by estimates. This, plus the fact that adjustment factors obtained from past day use calibration surveys are becoming increasingly dated, serves to illustrate the need to **interpret the day use data with caution**.

It is important to note a significant change to the day use statistics reported for provincial recreation areas. For the majority of provincial recreation areas outside of Kananaskis Country, day use statistics prior to 1989 were calculated using camping figures multiplied by the relative relationship between camping and day use. Beginning in 1989, day use statistics for provincial recreation areas are based upon Automatic Traffic Counter readings, as is the case with provincial parks.

The day use methodology for provincial recreation areas adjusts traffic counts for camper traffic (determined from permit sales and estimates of non-compliance and multiple entries/exists) and estimates of non-recreational vehicles to yield survey information and the estimates of day use visitation. This approach to day use estimation is referred to as the 'Residual Method'. This approach is also used for reporting off-season day use estimates at the majority of provincial parks, which have not completed an off-season traffic survey. Due to the change in the collection methodologies at provincial recreation areas, no historical day use comparison is provided prior to the implementation of the residual method.

# Group Camping Statistics Methodology

A standard system for collecting group camping use statistics was implemented in 1986. No prior statistics are available. Currently the group use permit system collects information pertaining to group camping unit nights, group campers, and occupancy. A survey component of the group use permit provides the average number of people in a group unit, which is required to calculate the number of group campers.

# Fixed Roof Accommodation Use Statistics Methodology

Occupied room nights and number of guests are derived from receipts, summarized and forwarded from Kananaskis Country to Parks and Protected

Areas Division. The number of guests are based on actual figures as opposed to derived (i.e., using an average party size to calculate number of guests).

### Historical Comparison

Some of the regional boundaries have changed over the years and as a result, the shifting of

regional responsibilities for some parks and recreation areas has also occurred. It is therefore not possible to compare regional totals, for historical comparison purposes, from one publication to another (the exception being park specific totals). This report should be used to that end.

# Visitation Highlights For 1998/99

#### **Total Visitation**

Nearly 8.7 million people visited provincial parks and recreation areas during the 1998/99 Fiscal Year. This represents an increase of 2.1 percent from 1997/98 Fiscal Year.

The weather, fire hazard, road construction and other factors affect visitation to specific parks and recreation areas. Weather conditions for the summer months of 1998 were characterised by above normal temperature anomalies and drier than normal conditions.

### Overnight Visitation

The total number of campsites in operation during the 1998/99 Fiscal Year was 13,320. This represents a slight increase over the previous year.

The total number of camping parties increased 2.1 percent from the 1997/98 Fiscal Year. However it is important to note that for a number of sites, camping data was either incomplete or not available. The reported camping for these sites is based on a five-year average. These sites are identified in the statistics tables.

Group camping decreased by 12.5 percent from the 1997/98 Fiscal Year.

#### Day Use

An estimated 6.7 million-day use visitors used provincial parks and recreation areas during the 1998/99 Fiscal Year. This represents an increase of 2.0 percent from 1997/98 Fiscal Year.

It should be noted that for several areas within Kananaskis Country, day use data was incomplete. These areas are identified in the statistics tables as \( \frac{1}{2} \)\circ\ Data Incomplete. A figure is, however, estimated which is included in the regional (i.e., Southern East Slopes Region) and provincial totals. The estimated value is based on a previous five-year average for Kananaskis Country.

In addition, for a number of other sites, day use data was either incomplete or not available. The reported day use for these sites is based on a five-year average. These sites are identified in the statistics tables.

#### Final Synopsis

In comparing the Fiscal Year 1998/99 over the previous year, the province experienced an increase in camping and day use while group camping decreased. Overall, total visitation to provincial parks and recreation areas increased slightly. It is important to note that for several areas, data was either not available or incomplete. For the most part, this effected the reported day use visitation. Clearly this has an impact on the reported visitation but the extent cannot be ascertained at this point in time. The information contained in this report is the best available at the time of preparation.

Efforts to review the statistics collection system to meet present and future needs through automated query facilities are ongoing. For further information on this, please contact: Program Evaluation and Research Coordinator.

#### Glossary

## Camping Use Definitions

Average Camping Party Size - Average number of people per occupied campsite. This is determined for each area by a periodic survey of camping permits.

Average Daily July-August Percent Campground Occupancy - Total occupied campsite nights for July and August divided by the total number of site nights available for the same period. Resultant figures are expressed as a percentage (i.e., multiplied by 100).

Campers - Average camping party size multiplied by the number of occupied campsite nights. In the past, this was referred to as Individual Camper Nights.

Camping Accommodation Unit - A tent, a tent trailer, a travel-trailer, a motorhome, a camperized van, or a truck camper.

Camping Permits - Average number of camping permits issued per campsite multiplied by the monthly total of occupied campsite nights. It is important to note that this statistic represents an estimate of the number of camping permits issued. In the past, this estimate was referred to as Accommodation Unit Nights.

Occupied Campsite Night - One site occupied for one

Overflow Unit Night - One camping accommodation unit in an area designated as an overflow area for one night.

### **Group Use Definitions**

Group Area Nights Available - Number of group use areas multiplied by nights per month minus group areas closed per month multiplied by nights affected.

Group Camping Area Capacity - Each group camping area has a defined capacity. It is based on the number of camping accommodation units that can be accommodated in the group camping area.

Group Unit Night - One camping accommodation unit in an area designated as a group use area for one night.

Group Campers - Average camping party size multiplied by the number of group unit nights. In the past, this was referred to as Individual Group Camper Nights.

### Day Use Definitions

Average Day Use Party Size - Average number of people associated with a vehicle entering a Provincial Park or Recreation Area for one day or portion of one day without staying overnight. This is determined by a periodic survey of day users.

Day Use Party Visit - Person(s) in a vehicle entering a Provincial Park or Recreation Area for one day or portion of one day without staying overnight.

**Note:** In the case of 'walk-in' day users, a party is considered to be one or more individuals who appear to enter the park together.

Day Use Visitors - Person(s) making a recreational visit to a Provincial Park or Recreation Area for one day or portion of one day without staying overnight. In the past, this was referred to as Individual Day Users.

# Fixed Roof Accommodation Use Definitions

Average Daily July-August Percent Fixed Roof
Occupancy - Total occupied room nights for July and
August divided by the total number of room nights
available for the same period. Resultant figures are
expressed as a percentage (i.e., multiplied by 100).

Occupied Room Night - One room occupied for one night.

Guests - Actual number of people per occupied room.
